SINEAX CAM
Universal measuring unit for heavy current variables

Main features

- Consistent measurement (without interruption)
- Suitable for strongly distorted networks, zero crossing or phase angle controls
- I/O interface adaptable to individual requirements
- Configuration and measured value acquisition via USB and Modbus interface
- Acquisition of minimum and maximum values with time stamp
- Graphic display with free measurement display assembling and alarm handling
- Logger for long-term recording of measurement progressions
- Lists for recording events, alarms and system messages

Fig. 1. SINEAX CAM in top-hat rail housing.

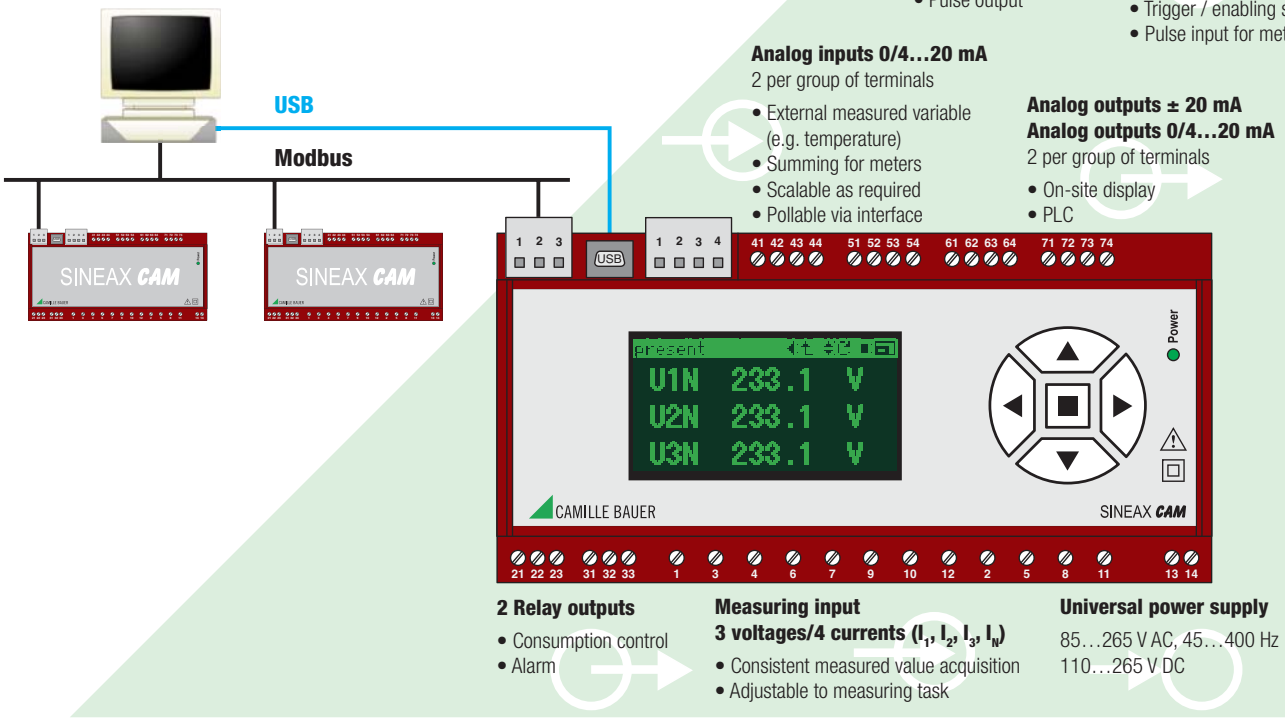
Application

SINEAX CAM is designed for measurements in electric distribution systems or in industrial facilities. Along with the current system state the pollution due to non-linear loads as well as the overall load of the supply system can be detected. Consistent measurement also guarantees that every network change is reliably acquired and included in measured data. The high-performance measuring system makes the device also suitable for strong distorted systems as well as for zero crossing or phase-angle controls.

The I/O interface may be individually assorted depending on the application. Up to 4 modules with different functionality may be used.

The logger allows long-term recordings of measurement progressions, e.g. to monitor the variable load of transformers, as well as meter readings at definable times. Lists offer the chronological recording of events, alarms or system messages for further analysis of occurrences in the power system.

The graphic display is intended for on-site visualization of measurements, lists and alarms. Via keypad the user can e.g. acknowledge alarms or reset extreme values.



HV-Input
110/230 V AC
1 per group of terminals
- Voltage monitoring
- Synchronisation RTC on network frequency

Digital outputs S0
3 per group of terminals
- Alarm
- State message
- Pulse output

Digital inputs
3 per group of terminals
- State acquisition
- Trigger / enabling signal
- Pulse input for meter

Analog inputs 0/4…20 mA
2 per group of terminals
- External measured variable (e.g. temperature)
- Summing for meters
- Scalable as required
- Pollable via interface

Analog outputs ± 20 mA
Analog outputs 0/4…20 mA
2 per group of terminals
- On-site display
- PLC

2 Relay outputs
- Consumption control
- Alarm

Measuring input
3 voltages/4 currents (I_1, I_2, I_3, I_N)
- Consistent measured value acquisition
- Adjustable to measuring task

Universal power supply
85…265 V AC, 45…400 Hz
110…265 V DC

SINEAX CAM
Universal measuring unit for heavy current variables

Applicable standards and regulations

(Issue: May 2006)

IEC/EN 61 010-1	Safety regulations for electrical measuring, control and laboratory equipment
IEC/EN 60 688	Electrical measuring transducers for converting AC electrical variables into analogue and digital signals
DIN 40 110	AC quantities
IEC/EN 60 068-1-1/-2/-3/ -6/-27:	Ambient tests
	-1 Cold, -2 Dry heat, -3 Damp heat, -6 Vibration, -27 Shock
IEC/EN 60 529	Protection types by case
IEC/EN 61 000-6-2/-6-4:	Electromagnetic compatibility (EMC), Generic standard for industrial environments
IEC/EN 61 131-2	Programmable controllers – Equipment requirements and tests
IEC/EN 61 326	Electrical equipment for measurement, control and laboratory use – EMC requirements
IEC/EN 62 053-31	Pulse output devices for electromechanical and electronic meters (two wires only)
UL94	Tests for flammability of plastic materials for parts in devices and appliances

Technical data

Measurement input

Rated frequency:	50 … 60 Hz (± 5 Hz)
Measurement TRMS:	Up to the 63rd harmonic
Measurement category:	≤ 300 V CATIII, ≤ 600 V CATII

Current measurement

Rated current:	1 A (+ 20%), 1 A (+ 100%), 5 A (+ 20%), 5 A (+ 100%)
Overrriding max.:	10 A (sinusoidal)
Consumption:	≤ I^2 x 0.01Ω per phase
Thermal ratings:	12 A continuous 100 A, 10 x 1 s, interval 100 s

Voltage measurement

Rated voltage:	57.7 … 400 V_{LN}, 100 x 693 V_{LL}
Overriding max.	600 V_{LN}, 1040 V_{LL} (sinusoidal)
Consumption:	≤ U^2 / 3 MΩ per phase
Input impedance:	3 MΩ per phase
Thermal ratings:	480 V_{LN}, 832 V_{LL} continuous 600 V_{LN}, 1040 V_{LL}, 10 x 10 s, interval 10 s 800 V_{LN}, 1386 V_{LL}, 10 x 1 s, interval 10 s

System

Single-phase	1L
Split Phase	2L
3-wire system, balanced load	3Lb
3-wire system, unbalanced load	3Lu
3-wire system, unbalanced load (Aron)	3Lu.A
4-wire system, balanced load	4Lb
4-wire system, unbalanced load	4Lu
4-wire system, unbalanced load (Open-Y)	4Lu.O

THD U (Total Harmonic Distortion): Harmonic content related to the fundamental of the RMS value of voltage.

TDD I (Total Demand Distortion): Harmonic content related to the fundamental of the RMS value of the rated current.

Energy meters (high and low tariff)

Active energy:	Incoming
Active energy:	Outgoing
Reactive energy:	Incoming
Reactive energy:	Outgoing
Reactive energy:	Inductive
Reactive energy:	Capacitive

I/O-Interface

Relay

Number:	2
Contacts:	Changeover contact
Load capacity:	250 V AC, 2 A, 500 VA 30 V DC, 2 A, 60 W

I/O-Module (optional)

Up to 4 different groups of terminals (41-44, 51-54, 61-64, 71-74) with defined input/output functions are available depending on the selected options. These groups are galvanically isolated from each other and from the rest of the device.

The following modules are available:

Analog outputs

2 active current outputs per group of terminals

Linearization:	Linear, quadratic, kinked
Range:	0/4-20 mA (24 mA max.), unipolar or ± 20 mA (24 mA max.), bipolar
Accuracy:	± 0.1% of 20 mA
Burden:	≤ 500 Ω (max. 10 V / 20 mA)
Burden influence:	≤ 0.1%
Residual ripple:	≤ 0,2%
Galvanical isolation:	From all other connections (connected within group of terminals)

Analog inputs

2 current inputs per group of terminals

Range:	0/4 - 20 mA (24 mA max.) unipolar
Accuracy:	± 0.1% of 20 mA
Input resistance:	< 40 Ω
Galvanical isolation:	From all other connections (connected within group of terminals)

Digital inputs/outputs

3 per group of terminals, in relation to software configurable as passive inputs or outputs (all the same), acc. EN 61 131-2

Inputs (acc. EN 61 131-2 DC 24 V Type 3):

Function	State input, pulse counter
Rated voltage	24 V DC (30 V max.)
Input current	< 3.5 mA
Counting frequency (S0)	≤ 50 Hz
Logical ZERO	- 3 till + 5 V
Logical ONE	11 till 30 V
Switching limit	Approx. 6.5 V / 2.6 mA

Outputs (partly acc. EN 61 131-2):

Function	State output, pulse output
Rated voltage	24 V DC (30 V max.)
Rated current	50 mA (60 mA max.)
Switching frequency (S0)	≤ 20 Hz
Leakage current	0.1 mA
Voltage drop	< 3 V
R_{Lmin}	400 Ω
Fuse	Tripping at appr. 140 mA (self-regulating)

HV-Input 110/230 V AC

1 input for RTC synchronization or state recognition.

Function:	Synchronization RTC, Logic
Rated voltage:	110 till 230 V AC (≥ 100 V AC, ≤ 264 V AC)

Input current:	< 10 mA
Frequency range:	45 till 65 Hz
Logical ZERO:	0 till 40 V AC
Logical ONE:	80 till 264 V AC
Switching limit:	Approx. 60 V AC / 1.9 mA ± 20%

Interface

Modbus connection (plug-in screw terminals 1, 2, 3)

Function:	Configuration, measurement acquisition
Protocol:	Modbus RTU
Physics:	RS-485, max. distance 1200 m (4000 ft)
Baudrate:	Configurable (1.2 till 115.2 kBaud)
Number of bus stations:	≤ 32

USB connection (USB Mini-B, 5 contacts)

Function:	Configuration, measurement acquisition
Protocol:	USB 2.0

Subbus connection (plug-in screw terminals 1, 2, 3, 4)

Function:	reserved for future device options

Power supply

Option 1

AC, 45 - 450 Hz:	85 … 265 V
DC:	110 … 265 V
Consumption:	≤ 10 W resp. ≤ 20 VA
Inrush current:	< 25 A / 0.3 ms
System voltage drop with optional I/Os:	< 200 ms (230 V AC) < 40 ms (115 V AC)
System voltage drop without optional I/Os:	< 400 ms (230 V AC) < 80 ms (115 V AC)

Option 2

DC:	19 … 70 V
Consumption:	≤ 10 W

Limit module (Software function)

64 limit values for monitoring measurement limits

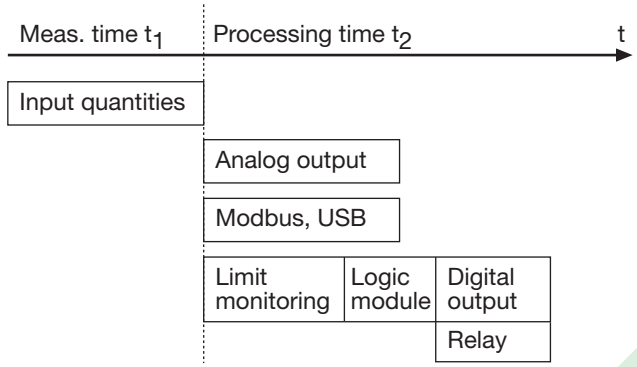
Limit for ON state:	Programmable
Limit for OFF state:	Programmable

Logic module (Software function)

32 logic functions to combine logical states: Limit values, digital inputs, LS-states and default values. Output to digital outputs, relays or other logic functions possible.

Response time

The total response time is the addition of the measurement time $\mathbf{t_1}$ of the input quantities and the processing time $\mathbf{t_2}$ for the respective output (analog output, bus, digital output, relay).



Measurement time t_1

Basic measurement quantities

Measurement interval:	Programmable, 1 … 999 periods (averaging time RMS value)
Measurement time t_1:	2 x measurement interval + 17 ms

System analysis quantities

Measurement interval:	18 periods
Measurement time t_1:	2 x measurement interval

Analog input

Measurement time t_1:	25 ms … 30 s (programmable)

Digital input

Measurement time t_1:	< 25 ms

HV-Input 110/230 V AC

Measurement time t_1:	2 till 255 periods (programmable)

Total response time $t_1 + t_2$

Analog output:	t_1 + 10 ms … 60 s, programmable
Modbus / USB:	t_1
Digital output:	t_1 + 8 ms + logic module
Relay:	t_1 + 30 ms + logic module

(Logic module: Switch-in/dropout delay 0 … 65 s, programmable)

Example: Relay has to toggle if $P > P_{limit}$, rated frequency is 50 Hz, averaging time is 1 period, switch-in delay logic set to 0 s

Response time
40 ms + 17 ms + 0 ms + 30 ms = 87 ms

Internal clock (RTC)

Function:	Time reference, counter for operating hours
Accuracy:	± 2 minutes / month (15 till 30°C), trimmable via PC-Software

SINEAX CAM
Universal measuring unit for heavy current variables

Synchronization via:	Measurement input, HV-Input 110/230 V AC, synchronization pulse (digital input)
Running reserve:	> 10 years

Vibration withstand (tested according to DIN EN 60 068-2-6)

Acceleration:	± 5 g
Frequency range:	10 … 150 … 10 Hz, rate of frequency sweep: 1 Oktave/Minute
Number of cycles:	10 in each of the three axes
Result:	No faults occurred, no loss of accuracy and no problems with the snap fastener

Ambient conditions, general information

Operating temperature:	– 10 till 15 till 30 till + 55 °C
Storage temperature:	– 25 till + 70 °C
Variations due to ambient temperature:	0.5 x basic accuracy per 10 K
Long term drift:	0.2 x basic accuracy per year
Others:	Usage group II according IEC/EN 60 688
Relative humidity:	< 95% no condensation
Altitude:	≤ 2000 m max.

Indoor use statement!

Mechanical attributes

Dimensions:	186 x 90 x 62 mm
Mounting:	On top-hat rail acc. DIN EN 50 022 (35 x 15 mm and 35 x 7.5 mm)
Orientation:	Any
Housing material:	Polycarbonat (Makrolon)
Flammability class:	V-0 acc. UL94, self-extinguishing, non-dripping, free of halogen
Weight:	500 g

Security

The current inputs are galvanically isolated from each other.

Protection class:	II (protective insulation, voltage inputs via protective impedance)
Pollution degree:	2
Protection:	IP40, housing (test wire, IEC/EN 60 529) IP20, Terminals (test finger, IEC/EN 60 529)
Measurement category:	CAT III (at ≤ 300 V versus earth) CAT II (at > 300 V versus earth)
Rated voltage (versus earth):	Power supply: 265 V AC Relay: 250 V AC I/O's: 30 V DC (Low-Level) 264 V AC(HV-Input)
Test voltages:	DC, 1 min., acc. IEC/EN 61 010-1 4920 V DC, power supply versus inputs U I, Bus, USB, I/O's, Relay 4920 V DC, inputs U versus relay, HV-Input
Test voltages (continuation):	3130 V DC, inputs U versus inputs I, Bus, USB, Low Level I/O's 4920 V DC, inputs I versus Bus, USB, I/O's, Relay 4690 V DC, inputs I versus inputs I 4920 V DC, relay versus relay 4250 V DC, relay versus Bus, USB, I/O's

Graphic display (optional)

The graphic display is intended for on-site visualization of measurements, lists and alarms. Via keypad the user can e.g. acknowledge alarms or reset extreme values.

The parametrization of the graphic display and the assembling of user specific measurement displays is performed using the CB-Manager software. Parameters like contract or the selection of the display language can be set also directly using the keypad.

The operation of the graphic display is described in a separate document, which is attached to all devices equipped with display. This manual may also be found on the software CD.

Logger and lists (optional)

By means of these options measurement and event may be long-term recorded. Depending on the application 9 different kinds of data may be acquisited:

- Progression of mean-values with interval time t1 (1s…60 min)
- Progression of mean-values with interval time t2 (1s…60 min)
- Min/Max values during interval t3 (1s … 3h)
- Meter readings
- List entries of alarms
- List entries of events
- List entries of system messages

They share the available storage space of 64Mb size. The memory allocation may be performed using the CB-Manager software. Due to the high degree of freedom for the configuration of logger and lists no general information about the maximal storage duration can be given. But these can be seen in the software when selecting the memory allocation, the measurands to store and the number of list entries.

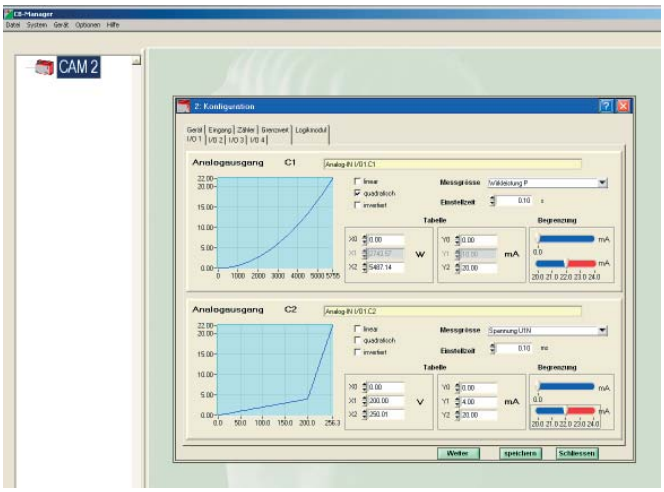
The reading and analyzing of logger and list data can be done using the **CB-Analyzer** software.

CB-Manager Software

The PC software CB-Manager which is supplied with each device may be used for the parametrization of the SINEAX CAM. Via USB or RS485 interface all measured data can be read and recorded as well.

The access to the device can be restricted by activating a password protection system. For up to 3 users you may selectively grant the right for configuration, reset or simulation functions.

SINEAX CAM
Universal measuring unit for heavy current variables



- Complete parametrization of the device (ONLINE, OFFLINE)
- Read and record all measured data
- Archiving of configuration and measurement data
- Setting and resetting meter contents
- Selective resetting of minimum and maximum values
- Setting of interface parameters
- Trimming of analog inputs
- Simulation of I/O-module functionality
- Comprehensive help function
